

Assignment- Django REST API

Problem Statement

Build a RESTful API using Django and Django REST Framework (DRF) for a Blog Post management system. The API should support CRUD operations, user authentication, custom permissions, filtering, searching, ordering, and pagination.

The API should:

- Allow authenticated users to Create, Read, Update, and Delete blog posts
 - Restrict users to only access and modify their own posts
 - Support filtering posts by creation date
 - Support searching posts by title and content
 - Support ordering by ID
 - Implement pagination (5 posts per page)
 - Use Token/Session-based authentication via DRF
-

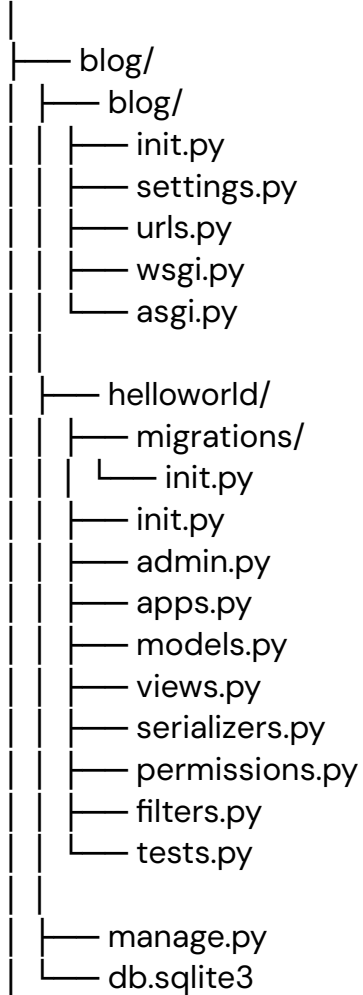

Tech Stack

Component	Technology
Backend Framework	Django 6.0.1
REST Framework	Django REST Framework (DRF)
Filtering	django-filter
Database	SQLite3 (default)
Authentication	Session Auth + DRF Browsable API
Language	Python 3

Project File Structure

DjangoRestAPI-YourName/

Expected Output

Running the project should:

- User should be able to login using Django authentication
 - API endpoints should work for blog posts
 - Authenticated user should be able to create, view, update, and delete posts
 - User should only access their own posts
 - API should return paginated results (5 posts per page)
 - Filtering, searching, and ordering should work correctly
 - All responses should be in JSON format
-

Submission Guidelines:

- Create **ONE main folder**.
- Example folder name:
DjangoRestAPI-YourName
- Inside this folder include:
 - Complete Django project folder
- Ensure all required project files are included
- Convert the folder into **ZIP format**.
- Upload the ZIP folder on the submission portal.
